Querying system information

Action	Command
IP configuration	show interfaces
Routing	show ip route
Show configuration	show
Show log	monitor log, show log tail

Basic configuration

Workflow:

```
vyos@vyos $ configure
vyos@vyos # [configuration commands]
vyos@vyos # commit
vyos@vyos # save
vyos@vyos # exit
vyos@vyos $
```

Action	Command
Set host name	set system host-name HOSTNAME
Set DNS server	set system name-server 8.8.8.8
Set DNS forwarding	set service dns forwarding listen-on eth1 set service dns forwarding name-server 8.8.8.8
Turn on SSH access	set service ssh listen-address 0.0.0.0
Keyboard layout ¹	sudo dpkg-reconfigure keyboard-configuration
Set time zone	set system time-zone [TAB]

Configuring network interfaces

Action	Command
Run "normal" commands in config mode	run COMMAND
Set IP address on interface	set interfaces ethernet eth0 address 192.168.0.1/24
Run DHCP client on interface	set interfaces ethernet eth0 address dhcp
Set interface description	set interfaces ethernet eth0 description WAN

¹Use in non-config mode

Static routing

Action	Command
Add route	<code>set protocols static route 192.168.0.0/24 next-hop 10.0.0.1 distance 1</code>
Set default gateway	<code>set protocols static route 0.0.0.0/0 next-hop 10.0.2.2 distance 1</code>
Drop traffic	<code>set protocols static route 172.16.0.0/12 blackhole distance '254'</code>

RIP

Example with two directly connected networks:

```
# set protocols rip network 192.168.0.0/24
# set protocols rip network 192.168.1.0/24
# set protocols rip redistribute connected
```
